

FUTURE CONNECTIONS OF THE WESTSIDE TRAIL

FROM WALKER RD TO KAISER

Bridging people across 25 miles of trails

THPRD is exploring the development of future Westside Trail sections from NW 158th & Walker Rd to NW Kaiser Rd, including a pedestrian-bicycle bridge over Highway 26. From 2025 to 2026, THPRD is designing the trail sections that will lead to the future bridge and studying options for trail construction. The future trail sections would close a gap in the larger metro regional trails system that was established in partnership with Metro and municipalities across the region.

About the trail study

Expanding one of the region's most critical corridors with 100,000+ users per year.

Connecting people to schools, jobs, recreation, public transit, shopping, and natural areas.

Linking over 25 miles of trail for community pedestrians and cyclists.

Collaborating with local organizations like Metro, ODOT, City of Beaverton, Washington County, PGE, BPA, and many more.

Studying options for trail alignment, size, connections, and budget, as well as community interest and possible barriers.
